The trading portfolio of the Atlantis Private Algorithmic Hedge Fund is realized with a daily frequency of trading in high liquidity markets. The objective of the fund is to provide an absolute return with a moderate risk profile and low correlation of the underlying assets. The Fund seeks to achieve its objectives by developing, testing, and implementing a portfolio of systematic and algorithmic trading models. The trading portfolio includes several market assets in metals, currency instruments, indices, and energy assets. Execution of individual trades takes place in regulated, centralized, and derivative markets.

The strategy executes long and short positions to benefit from the identified short, medium, and seasonal trends and trends resulting from repetitive patterns, price formations. The system can apply a hedge trading approach in critical situations and high volatility. The goal of the portfolio, which is calibrated from ~ 50 logically different trading systems, is to provide profit each month. Our risk management is strictly based on clearly defined rules of a dynamically changing portfolio that constantly adapts to market conditions. We rely on an attractive return-to-risk ratio and stability.

Speech of our CEO JUDr. Ľuboš Žuffa

Last month was the end of August, where there were smaller movements. Large funds and companies are currently preparing for the September meeting of the FED, which will take place these days, where it will be decided in which direction it will be sent and in what way they will lower interest rates. Currently, the market is calm, there have been sales at events. We will be surprised by the outcome of the FED meeting.
